I was able to find some background information under Pennzoil's name. Evidently it was used as a bulk fuel storage facility by Pennzoil Quaker State (WVD055573745) up until 2002 when they ceased generating hazardous waste and closed. There is a note that the facility was sold to a company called POCA Blending, but there is no further information.

The other Freedom Transportation companies we spoke about notified as generating a state regulated waste.

Good afternoon, John.

I spoke with Ken Cox who is acting for Carol. He indicates that he cannot find anything listed for this facility or address. There is a similarly named transportation company nearby, so Ken indicated it is possible that this is a related storage facility that does not, itself, generate any waste (though there was no info Ken could find that directly stated this.)

I told Ken we would keep him in the loop on the hot site reports just in case something winds up popping for us.

Thanks,  
Cathy

Subject: HOTSITE REPORT: Freedom Industries, Charleston, WV

This afternoon there was a chemical spill from Freedom Industries, which is the old Pennzoil Refinery. The spilled chemical was methylcyclohexane, which is used in coal preparation and processing. Spill into the ELK River occurred sometime earlier in the day and there was an early report of an odor. The Gov of WV declared a state of emergency for at least five counties. The Kanawha Valley Water Treatment Plant detected the chemical even after the increased carbon treatment effort.

WV issued an order to not drink cook or bathe in the water, which affects approximately 100,000 people. WV is conducting additional water sampling. The Civil Support Team is also deployed to the WVEOC to assist in supplying water to residents. The WV EOC is operational but have not requested EPA assistance. OSC Dennis Matlock has contacted WV DEP Mike Dorsey and offered EPA assistance.
